

# Fun with Stamps – 6

## Stretch A Stamp

We're going to make the largest stamp ever!

*As big  
as this  
paper?*

*As big  
as the  
table?*

*As big  
as the  
blackboard?  
WOW!*

Will yours be a Guinness record?

### You will need:

- A stamp that you really like and would like to have as a poster. (Choose a damaged stamp because you will be drawing on it.)

### How to stretch a stamp:

1. Draw grid lines across your stamp evenly. Number the squares down and letter the squares across like the example below:
2. Now draw another larger grid with the same number of squares onto a large piece of paper. (Or - if you want to make a world record - on the blackboard or even on the asphalt!)
3. Don't forget to number and letter the grid squares!
4. Now copy whatever is in each little square of your stamp onto the big grid. (That is, copy the part of the picture in A1 to A1 on the big grid, etc.)
